Background

See my recent work at <https://bdenzer.com>

7+ Years in web development

5+ Years with React and Node.js

2 Years with Angular, Polymer, and MySQL

I am a full stack JS developer with a focus on the front-end. At my current company I am the lead developer and architect for our React application, but more than half of my time is spent in our multiple Node.js APIs and Azure serverless functions. Before we had a robust Salesforce dev team, I had also worked with Lightning Web Components and APEX to customize our Salesforce platform.

At my previous job I led a project where we integrated React into a very large and complex application, and another project where we created a custom text editor in Angular 7/8. I wrote multiple shell scripts to automate processes for the team. I also maintained projects in Polymer.js and jQuery.

I created Official-Typing-Test.com, a site getting over 1,000,000 page views per month. I built everything from scratch – Set up an Ubuntu server, coded the front end, wrote the Express server and MySQL database, integrated with Stripe for payments and a custom integration with MailChimp. I wrote shell scripts to automate backups to a different server, renew the SSL certificate, automate deployments, etc.

Skills

- | | | |
|------------------|---------------------|----------------|
| • JavaScript | • Responsive Design | • Azure |
| • React | • Flex-Box | • Git / Github |
| • Node / Express | • Materialize | • Bash |
| • TypeScript | • Bootstrap | • PowerShell |
| • Angular | • SASS | • NGINX |
| • Polymer.js | • CSS | • Heroku |
| • jQuery | • Webpack | • MySQL |
| • Redux | • Gulp | • Linux |

Employment

Senior Full Stack Engineer

Byte – Las Vegas, NV

Jan 2020 – present

- Lead development in the “Account Center” to allow patients the opportunity to self-serve many tasks, taking the burden away from the clinicians and customer service reps.
- Work across the whole codebase. React/Redux, Node.js APIs, Azure Functions, Shopify templates, Salesforce processes.
- Mentor the newer developers.

Software Engineer

Kaseya – Henderson, NV

Aug 2017 – Jan 2020

- Modernized the customer facing application by integrating React components into a legacy EXT.js project.
- Created a customer facing text editor using Angular 7/8.
- Streamlined development, build, and deployment processes using shell scripts and NPM scripts.
- Maintained several applications that use Polymer 1.x, jQuery, React, and Angular.

Front-End Developer

Apartments247.com – Las Vegas, NV

June 2016 – Aug 2017

- Created a custom mapping application using React, Redux, and the Google Maps API.
- Customized hundreds of websites using LESS and Bootstrap, vanilla JS, and jQuery.

Freelance Web Developer

Henderson, NV

2013 – present

- Created Official-Typing-Test.com, MySightWords.com, Learn10Key.com and more.
- Over 60,000,000 page views and 130,000,000 ad impressions.
- Experience with React, Redux, jQuery, Node.js, Express.js, Bash, MySQL, NGINX.
- Integrate with Stripe, MailChimp, and other 3rd party APIs.
- Set up and maintain my own servers and databases.
- Write scripts to automate server backups, server updates, SSL renewals, etc.

Digital Technician / Crane Operator

Lamar Advertising – Las Vegas, NV

April 2014 – June 2016

- Responsible for safety of crew and maintenance of equipment and signs.
- Certified in crane operation, digital billboard repair, commercial driving, electrical safety, first aid, and CPR.
